Our Services

- **IT Consultant and Auditor**

We provide expert consulting and auditing services in Digital Transformation, IT Governance, Information Security Management Systems, IT Master Plans, IT Security Master Plans, and IT Service Master Plans.

- **System Integrator**

Our system integration offerings encompass comprehensive IT solutions, including: planning, design, and implementation of IT infrastructure such as computer networks, automation systems, telecommunication, and data centers.

- **Training & Certification**

We deliver professional training and certification services in Information Technology. As an Authorized Pearson VUE Test Center, we facilitate the administration of international certifications, such as: Cisco, CompTIA, Microsoft, NetCampus, etc.

- **Software Developer**

Our software development services are tailored towards the creation of Documentation Management Systems (DMS) designed to manage various types of ISO documents effectively.

Why You Should Choose Us

Reliable and Professional IT Experts in IT Management

Our team comprises experts who are experienced in their respective fields especially IT Management, each holding both international and local IT certifications.

Technical Expertise Background

Our team consists of seasoned professionals specialized in computer networking, information security, and software development. We are dedicated to supporting you in developing IT solutions that fulfill your needs and exceed your expectations.

Soft Skills & Orientation Towards Service Excellence

Communication and coaching skills are key assets that enhance our ability to provide top-tier IT consulting and training services to our clients.

Understanding of Business and Management

Our deep understanding of business and management ensures that the technology solutions we propose and design are strategically aligned with the organizational goals.

IT Consultant & Auditor

Company Profile PT NetSolution

IT Consultancy Services

Digital Transformation

Consultation and assessment/audit services for the implementation of Digital Transformation.

IT Governance & Management

Consultation and assessment services for IT Governance and Management.

Information Security Management System

Consultation and audit/assessment services for the implementation of Information Security Management Systems (ISMS), penetration test, and vulnerability assessment.

IT Strategic Plan

Consultation services for developing Enterprise Architecture, IT Master Plans, IT Strategic Plans, IT Security Master Plans, and IT Service Master Plans.

Design and Planning of IT & Telecom Infrastructure

Consultation services for IT and Telecommunications infrastructure design, i.e., data centers, building automation, smart industrial estates, and 5G networks.

Digital Transformation

- **Digital Transformation Strategy & Roadmap Development**

Develop a digital strategy, target conditions, multi-year roadmap, and prioritized, measurable initiatives aligned with business objectives, regulatory requirements, and organizational capabilities.

- **Implementation Advisory & Change Management**

Support the execution of digital transformation initiatives through the establishment of governance models, change management, operating model enhancement, capability building, and execution oversight to ensure effective roadmap delivery.

- **Digital Transformation Maturity Assessment**

Conduct a comprehensive assessment of the organization's readiness and maturity across strategy, business processes, technology, data, human resources, and governance as the foundation for defining the transformation direction.

- **Evaluation and Value Realization**

Measure transformation performance, assess business benefits (value realization), track digital KPIs, and drive continuous improvement to ensure the transformation delivers tangible and sustainable impact.

IT Governance & Management

- **IT Governance Assessment & Audit**

Evaluate the effectiveness and maturity of IT governance structures, policies, processes, and controls against recognized frameworks and regulations (e.g., COBIT, ISO, regulatory requirements)

- **IT Governance Framework Design & Implementation**

Design and implement IT governance frameworks, policies, operating models, committees, and decision rights to ensure alignment between IT and business objectives.

- **IT Risk Management, Compliance & Assurance**

Identify, assess, and manage IT risks; support regulatory compliance; and provide assurance services covering information security, data protection, and technology risk controls.

- **Performance Management & Continuous Improvement**

Establish KPIs, metrics, and monitoring mechanisms to measure IT value delivery, optimize performance, and drive continuous improvement of IT governance and management practices.

Information Security Management

- **Information Security Assessment & Audit**

Assess and audit the organization's information security posture, controls, and processes against recognized standards and regulatory requirements (e.g., ISO/IEC 27001).

- **ISMS Design & Implementation**

Design, implement, and enhance an ISMS, including security policies, governance structures, risk treatment plans, and operational procedures aligned with business objectives.

- **Information Security Risk Management & Compliance**

Identify, analyze, and manage information security risks; support regulatory compliance; and ensure effective risk treatment and control implementation.

- **Penetration Testing & Vulnerability Assessment**

Perform vulnerability assessments and penetration testing to identify security weaknesses, evaluate exploitability, and provide actionable recommendations to strengthen the organization's security posture.

IT Strategic Plan

- **Enterprise Architecture Development**

Design and develop a comprehensive Enterprise Architecture (EA) covering business, data, application, and technology domains to ensure alignment between business strategy and IT capabilities.

- **IT Roadmap Development**

Define a structured, multi-year IT roadmap that translates the target enterprise architecture into prioritized initiatives, timelines, and investment plans aligned with business objectives.

- **EA & IT Roadmap Assessment**

Assess the maturity, effectiveness, and alignment of the existing enterprise architecture to identify gaps, risks, and improvement opportunities against best practices and organizational goals.

- **EA & IT Roadmap Training and Certification**

Provide structured training and certification programs to build organizational capabilities in enterprise architecture and IT roadmap development, aligned with recognized frameworks and industry best practices.

IT & Telecommunication Infrastructure Design

- **IT Infrastructure Architecture & Design**

Design scalable, secure, and resilient IT infrastructure architectures covering servers, storage, virtualization, cloud, and data centers to support current and future business needs.

- **Telecommunication Network Design**

Design enterprise-grade telecommunication networks, including LAN, WAN, WLAN, fiber optic, and connectivity architecture, ensuring performance, reliability, and security.

- **Infrastructure Capacity Planning & Technology Selection**

Conduct capacity planning, technology evaluation, and solution selection to ensure optimal performance, cost efficiency, and alignment with business growth and operational requirements.

- **Infrastructure Security & Resilience Design**

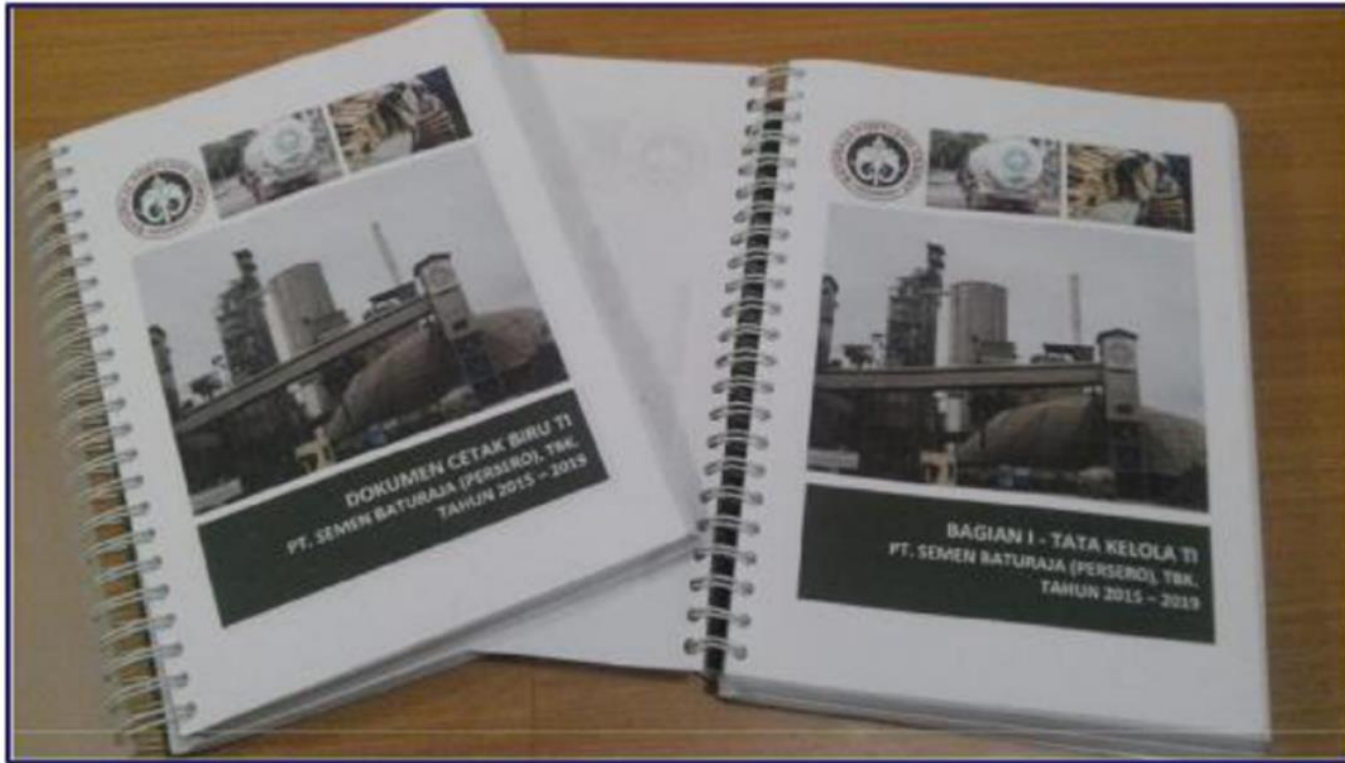

Design infrastructure-level security, high availability, disaster recovery, and business continuity architectures to ensure service reliability, data protection, and operational resilience..

Our Consulting & Audit Clients

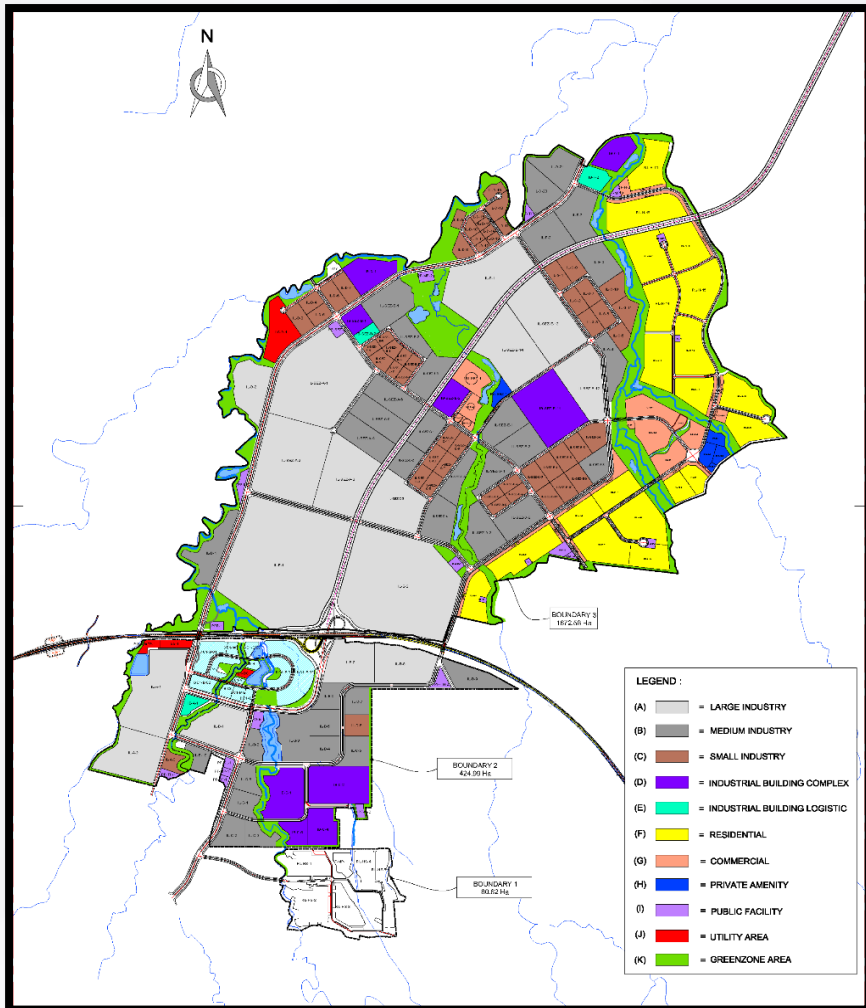

IT Blueprint and IT Governance Documents

IT Blueprint and IT Governance Documents for PT Semen Baturaja, Tbk. (2014)

Smart Industrial Estate Concept & Design

Detailed Engineering Design for Telecommunications (FTTH, 4G, 5G), LAN/WAN, and Automation for a Smart Industrial Estate (2,800 hectares) in Subang, West Java, Indonesia.

System Integrator

Company Profile PT NetSolution

Our System Integration Services

- **IT Solution Design & System Integration**

Design, integrate, and implement end-to-end IT solutions by combining hardware, software, network, and cloud technologies to meet business and technical requirements.

- **Application & Platform Implementation**

Implement enterprise applications, platforms, and middleware, including configuration, customization, integration, and deployment to support business operations.

- **Infrastructure Deployment & Modernization**

Deploy, upgrade, and modernize IT infrastructure such as servers, storage, networks, data centers, and cloud environments to ensure performance, scalability, and reliability.

- **Managed Services & Technical Support**

Provide ongoing managed services, monitoring, maintenance, and technical support to ensure stable operations, service continuity, and optimized system performance.

Our Clients

Our Projects

Implemented an automatic gate system at the Jakarta International Container Terminal (Phases 1, 6, 7, 8, and 10) as a subcontractor for IT infrastructure projects.

Training & Certification

Company Profile PT NetSolution

IT Training and Certification

- **Technical Training & Certification Programs**

Deliver structured technical training and certification programs covering IT infrastructure, cybersecurity, IT Management, data, and software technologies.

- **Professional & Role-Based IT Training**

Provide role-based training for IT professionals (e.g., system administrators, network engineer, security specialists, architects, IT auditor) aligned with industry best practices.

- **Customized Corporate Training & Workshops**

Design and deliver customized training programs, workshops, and bootcamps tailored to organizational needs, technologies, and business objectives.

- **Hands-On Labs, Simulation & Practical Learning**

Offer hands-on labs, simulations, and practical learning environments to enhance skills application, problem-solving, and real-world readiness.

Software Development

Company Profile PT NetSolution

DMS for ISO Docs Management

- **Centralized Document Control & Version Management**

Ensure all ISO documents are stored in a centralized repository with strict version control, preventing the use of outdated or unauthorized documents.

- **Access Control, Security & Audit Trail**

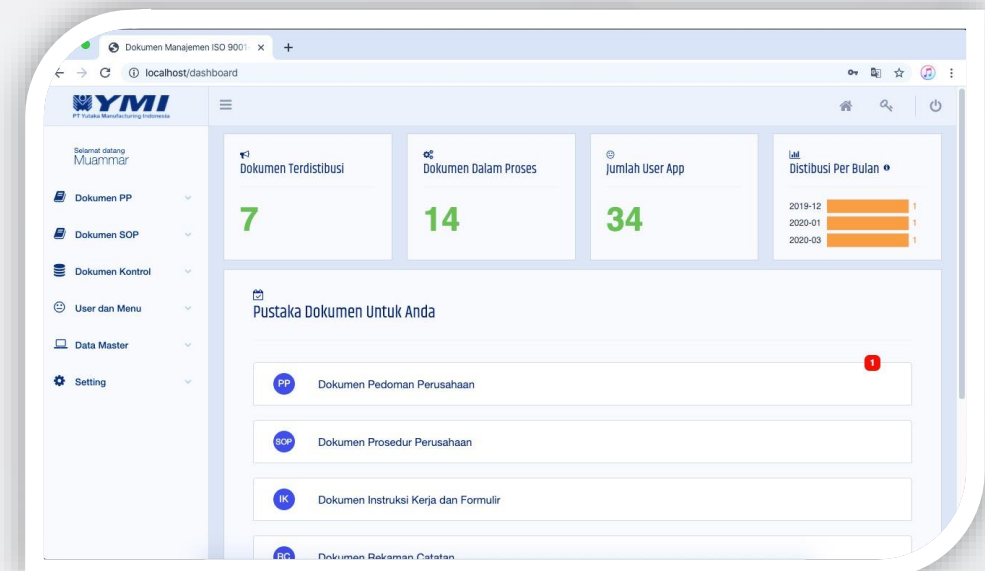

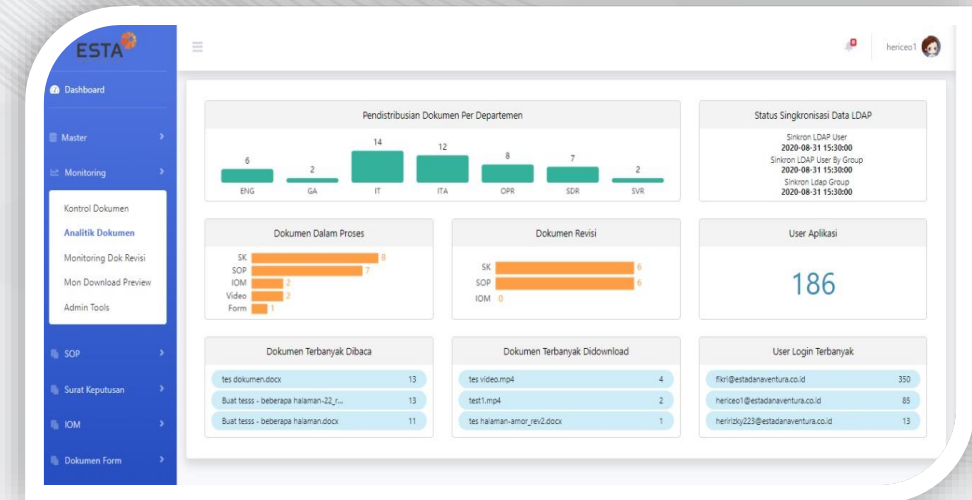

Manage user access, protect sensitive documents, and maintain complete audit trails to support accountability, traceability, and ISO audit requirements.

- **Workflow Automation & Approval Management**

Automate document creation, review, approval, and change processes to ensure compliance with ISO document control and change management requirements.

- **Compliance Support & Audit Readiness**

Enable fast retrieval of documents, evidence, and records required for internal and external ISO audits, ensuring continuous compliance and audit readiness.

Enterprise Resource Planning (ERP) using Odoo

- **Integrated End-to-End Business Processes**

Odoo ERP integrates core business functions such as finance, sales, procurement, inventory, HR, and operations into a single platform, ensuring data consistency and process efficiency.

- **Process Automation & Operational Efficiency**

Automate routine business processes, reduce manual work, minimize errors, and improve productivity through standardized and streamlined workflows.

- **Scalability & Modular Flexibility**

Odoo's modular architecture allows companies to start with essential modules and scale gradually as business needs grow, providing flexibility and cost efficiency.

- **Real-Time Visibility & Data-Driven Decision Making**

Provide real-time dashboards, reports, and analytics that enable management to monitor performance, gain insights, and make informed, data-driven decisions.
